Chain of Thought (CoT) – Bank Transaction Failure Scenario

Scenario: A customer attempts to transfer ₹50,000, but the transaction fails with the error message:

"Transaction could not be completed."

We can analyze this scenario using a structured reasoning approach similar to how an LLM or AI-powered banking support system would investigate the issue.

1. Problem Understanding

Parameter	Details
Transaction type	Fund transfer
Transaction amount	₹50,000
Transaction status	Failed
Error message	Transaction could not be completed
Customer impact	Unable to transfer funds
Severity	Medium to High

2. Possible Root Causes

No.	Possible reason	Explanation
1	Insufficient balance	Customer has less than ₹50,000 available.
2	Daily transaction limit	Customer has exceeded the daily transfer limit.
3	Bank server issue	Banking server is temporarily unavailable.
4	Beneficiary issue	Beneficiary account details are invalid or inactive.
5	Network timeout	Connection failed during transaction processing.
6	Risk control	Transaction was blocked by fraud detection rules.
7	NPCI/Payment gateway issue	External payment infrastructure is unavailable.
