Model Provider	Model	Release Date	Cut off Date	Cost of tokens (Input / Output)	Context Window	Type	When to use this model
OpenAI	GPT-6.1 Terra	26 Oct 2026	1 Jun 2026	$1.00 / $5.00	1.05M	Multimodal reasoning	Software development, UI automation, document processing and visual reasoning
Anthropic	Claude Haiku 5.5	7 Oct 2026	Jun 2026	$0.10 / $0.50	1M	Fast reasoning	Document processing, classification, information extraction and AI agents
Google DeepMind	Gemini 4 Argon	13 Oct 2026	Not disclosed	$2.00 / $10.00	1M	Multimodal reasoning	Complex coding, research, mathematics and multimodal analysis
xAI	Grok 4.7	21 Sep 2026	May 2026	$2.00 / $6.00	500K	Reasoning and coding	Software development, debugging, research and autonomous workflows
DeepSeek	DeepSeek V4.1 Flash	17 Oct 2026	Not disclosed	$0.30 / $1.20	1M	Reasoning and coding	Cost-effective AI applications, coding and large-scale processing
Mistral AI	Mistral Large 4	6 Oct 2026	Not disclosed	$1.36 / $4.18	1M	Open-weight multimodal MoE	Enterprise AI, RAG, multilingual applications and self-hosting
Moonshot AI	Kimi K3.1 Pro	23 Oct 2026	Not disclosed	$2.00 / $10.00	1M	Reasoning and multimodal	Long-document analysis, research and coding
MiniMax	MiniMax M3.1 Flash	19 Oct 2026	Not disclosed	$0.15 / $0.60	1M	Fast reasoning and agentic coding	High-volume AI agents, coding automation and enterprise workflows
NVIDIA	Nemotron 3.5 Super VL 120B	15 Oct 2026	Not disclosed	Deployment-dependent	Not verified	Open-weight vision-language	Visual document understanding, image analysis and custom AI deployments
Meta	Muse Spark	8 Apr 2026	Not disclosed	Not disclosed	Not disclosed	Multimodal reasoning	Visual reasoning, personal AI assistants and multi-agent workflows

1. The Illustrated Transformer – Jay Alammar

The Illustrated Transformer – Jay Alammar – Visualizing machine learning one concept at a time.
Best for beginners

Article: The Illustrated Transformer

Author: Jay Alammar

Read the complete article

What you will learn:

- Vector embeddings and positional encoding.
- Query, Key and Value vectors.
- Self-attention mechanism with visual examples.
- Multi-head attention.
- Feed-forward neural networks.
- Encoder and decoder architecture.

Why read it: Explains Transformer architecture using diagrams and step-by-step examples rather than starting with complex mathematics.

2. How Transformers Work – DataCamp

Transformer Model Architecture With Attention And Feed-forward Blocks テンプレート - FigPad
Best for technical understanding

Article: How Transformers Work: A Detailed Exploration

Publisher: DataCamp

Read the complete article

What you will learn:

- How text is converted into numerical embeddings.
- How self-attention calculates relationships between tokens.
- Scaled dot-product attention.
- Multi-head attention.
- Feed-forward neural networks.
- Layer normalization and residual connections.

Why read it: Helps connect the individual Transformer components and understand how they work together.

3. What is a Transformer Model? – IBM

Large Language Model: что это такое и и сферы их применения
Best for conceptual understanding

Article: What is a Transformer Model?

Publisher: IBM

Read the complete article

What you will learn:

- Transformer architecture fundamentals.
- Token embeddings and vector representations.
- Query, Key and Value operations.
- Attention scores and contextual relationships.
- How Transformer models process language.

Why read it: Provides a good conceptual foundation for understanding the role of each component in modern LLMs.
